### How your T-shirt can make a difference

Cotton is everywhere : in your furniture, in your food, in your wallet, in your closet. Cotton has a major impact on the planet.

Take your favourite cotton T-shirt : it takes 2,700 liters of water to make one T-shirt = enough for one person to drink for 900 days. It also takes a lot of energy to grow, manufacture, transport.

Mostly, it needs energy to care for it.

One load of drying uses 5 times more energy than washing.

One load of washing uses 40 gallons of water. Now think how often you wash and dry your T-shirt.

Don't we have plenty of resources? Plenty of water? Yes, but 97% is salty, nearly 2 % is locked in snow or ice. That leaves less than 1% that we can access and 70% of that grows our crops. Cotton is a very thirsty crop.

Now think how many T-shirts are in your closet? City? Country? On the planet?

How many T-shirts do you need?

How often do you need to wash and dry them?

There is a solution. We can use less water and less energy. Skip the drying and ironing and save 1/3 of your T-shirt's carbon footprint. Choices make a difference. Make each choice count.
